1. Edit the following text. [5]

Look at that thought he the land is all being sold and I shall get none of it so he spoke to his wife.

2. Read the following text carefully and interpret it so as to make the meaning clear. [5]

There is a big difference between the natural slavery of man to nature and the unnatural slavery of man to man. Nature is kind of her slaves. If she forces you to eat and drink, she makes eating and drinking so pleasant that when we can afford it, we eat drink too much. Thus, instead of resenting our natural wants as slavery, we take the greatest pleasure in their satisfaction. The slavery of man to man is the very opposite of this. It is hateful to the body and the spirit. Our poets do not praise it; they proclaim that no man is good enough to be another man's master. Naturally the master class, through its parliaments, schools and newspapers, makes the most desperate efforts to prevent us from realizing our slavery.

3. Study the following passage carefully. Then prepare its notes and summary. [5+5]

Dowsing the millennia-old practice of finding hidden things. The most well-known activity of dowsing involves the use of a device such as a forked stick to locate underground water. To this end, the dowser walks slowly back and forth over an area of ground holding the dowsing tool out in front with both hands. It is said that the dowser, by concentrating carefully is somehow able to feel the energy of the flowing underground streams vibrating through the rod at certain frequencies, and thus is able to tell precisely where to dig or drill to find water. Sometimes the dowsing tool will twist and jerk or suddenly point downward. Some dowsers hold two L-shaped rods, one in each hand. In this case, when he or she walks over an area of underlying water, the rods cross over indicating the place where digging should commence. In recent years dowsing has gained in popularity not only as a method for finding underground water but also for trying to uncover other objects including buried treasure, oil or even dead bodies. A recent application has been the search for what some consider harmful energy fields in an attempt to avoid them. Even large businesses and official organizations pay dowsers for their detection skills. Although no one is completely sure how dowsing works, the testimonials of satisfied customers bear witness to the success of this ancient art.

Broken friendship may be repaired but the break will always show. Friendship is a precious thing-too precious a treasure to be carelessly broken or thrown away. The world handles the word 'friend lightly; its real, true deeper meaning is forgotten. Your friend is one who appreciates you-your faults as well as your virtues. He understands and sympathizes with your defeats and victories, your aims and ideals, your joys and temptations, your hopes and disappointments, as no one else does or can. It is your friend to whom you turn for counsel, for comfort, for praise; he may not be as learned as some or as wise as others.

Blessed is the man or women into whose life has come the beauty and power of such a friendship. Prize it well. Do all in your power to keep such a friendship unbroken. Avoid the break, for when it comes it cannot be mended and the jarring note mars the harmony.

3. Study the following text carefully, prepare its note, and convert it into a summary.

[5+5]

To biomedical researchers all over the world, twins offer a precious opportunity to untangle the influence of genes and the environment- of nature and nurture. Because identical twins come from a single fertilized egg that splits into two, they share virtually the same genetic code. Any difference between them-one twin having younger-looking skin, for example-must be due to environmental factors such as less time spent in the sun.

Alternatively, by comparing the experiences of identical twins with those of fraternal twins, who come from separate eggs and share on average half their DNA, researchers can quantify the extent to which our genes affect our lives. If identical twins are more similar to each other with respect to an ailment than fraternal twins are, then vulnerability to the disease must be rooted at least in part in heredity.

These two lines of research-studying the difference between identical twins to pinpoint the influence of environment, and comparing identical twins with fraternal ones to measure the role of inheritance-have been crucial to understanding the interplay of nature and nurture in determining our personalities, behavior, and vulnerability of disease.

Education is an integral part of people's lives; it will either make them or break them in the prospect depending on their careers. Education is broadly diverse today compared to the 1950s because of progressions in teaching methods and other prominent inventions that implement more apparent teaching techniques. Online learning is one of the imminent trends in the education sector around the globe at present. This mode of learning is done through the internet. With advanced and upgraded technologies; this mode of learning has been made simpler. Online Education is also preferred in higher learning Institutions.

In E-learning, the students study from home or any other place, that is most convenient for them. They can acquire learning material online. The study materials in online education could be texts, audio, notes, videos and images. Online learning has its various benefits. It is suitable for those who cannot visit or obtain the traditional education method for one reason or the other. Nearly 6.1 million college students are currently attending online courses, and this number is growing by around 30 percent yearly. Online education provides a myriad of advantages for people, as well as companies because it allows for, among others, flexibility. Online education's potential advantages involve increased educational access; it provides a high-quality learning opportunity, improves student outcomes and skills, and expands educational choice options.

2. Read the following text carefully and interpret it so as to make the meaning clear. [5]

The survival of the publishing industry depends upon the existence of a public who will buy the printed word in the form of newspapers, books and magazines. Over the past several years, however, the advance of electronic media, particularly CD-ROMs, online computer services, and the internet, has made information available to the public electronically without the need for printed materials. As the availability of electronic media increases and as it is more easily accessible, the public has less need for printed materials.

3. Read the given passage carefully. And prepare notes and summary. [5+5]

The world needs to dramatically reduce its greenhouse gas emissions and fast, if there's any hope of preventing worse and more frequent extreme weather events. That means shifting to renewable sources of energy – and, importantly, decarbonizing transportation, a sector that is now responsible for about a quarter of the world's carbon dioxide emissions. But the path to that cleaner future is daunting, clogged with political and societal roadblocks, as well as scientific obstacles. Perhaps that's one reason why the electric vehicle – already on the road, already navigating many of these roadblocks – swerved so dramatically into the climate solutions spotlight in 2021.

Just a few years ago, many automakers thought electric vehicles, or EVs, might be a passing fad, says Gil Tal, director of the Plug-in Hybrid and Electric Vehicle Research Center at the University of California, Davis. It's now clear to everyone that [EVs are] here to stay. Globally, EV sales surged in the first half of 2021, increasing by 160 percent compared with previous year. Even in 2020 – when most car sales were down due to the COVID-19 pandemic – EV sales were up 46 percent relative to 2019. Meanwhile, automakers from General Motors to Volkswagen to Nissan have outlined plans to launch new EV models over the next decade: GM pledged to go all – electric by 2035, Honda by 2040. Ford introduced electric versions of its iconic Mustang and F – 150 pickup truck.

“Consumer demand for EVs isn't actually driving the surge in sales”, Tal says. The real engine is a change in supply due to government policies automakers to boost their EV production. The European Union's toughened CO<sub>2</sub> emissions laws for the auto industry went into effect in 2021, and automakers have already bumped up new EV production in the region. China mandated in 2020 that Evs make up 40 percent of new car sales by 2030. Costa Rica has set official phase-out targets for internal combustion engines.

The forms and functions of verbal communication vary significantly around the world and reflect striking differences in values and beliefs. These culturally learned patterns usually function on a highly unconscious level and can result in serious conflict, misunderstanding, and negative stereotyping when people from different cultures interact. To minimize such tensions and problems and to enhance intercultural communication, international travelers should be aware of their own speaking style and the ways it differs from that of the culture they are visiting. By increasing their knowledge of what people in the host country tend to say and how they tend to say it, international visitors will be able to traverse the minefield of cultural differences and adjust to the new environment more easily.

3. Read the following text carefully; make notes and write summary after a close reading. [5+5]

Modernization has generally enhanced the material level of civilization through out the world. But has it also enhanced the moral and cultural dimension of civilization? In some respects, this appears to be the case. Slavery, torture, vicious abuse of individuals, have become less and less acceptable in the contemporary world. Is this, however, simply the result of the impact of western civilization on other cultures and hence will a moral reversion occurs as western power declines? Much evidence exists in the 1990s for the relevance of the "sheer chaos" paradigm of world affairs: a global breakdown of law and order, failed states and increasing anarchy in many parts of the world, a global crime wave, transitional mafias and drug cartels, increasing drug addiction in many societies, a general weakening of the family, a decline in trust and social solidarity in many countries, ethnic religious, and civilizational violence and rule by the gun prevalent in much of the world. In city after city-Moscow, Rio de Janerio, Bangkok, Shanghai, London, Rome, Tokyo, Delhi, Karachi, Cairo, Washington-crime seems to be soaring and basic elements of civilization fading away.

People speak of global crisis of governance. The rise of transitional corporation producing economic goods is increasingly matched by the rise of transitional criminal mafias, drug cartels, the terrorists gangs violently assaulting civilization. Law and order is prerequisite of civilization and in much of the world-Africa, Latin America, South Asia, the former Soviet Union, the middle east-it appears to be evaporating. On a worldwide basis civilization seems in many respects to be yielding to barbarism, generating the

image of an unprecedented phenomenon, a global dark age, possibly descending on humanity.

The history of civilization shows man always how has to choose between making the right and wrong use of discoveries of science. This has never been truer than in our own age. In a brief period, amazing discoveries have been made and applied to practical purposes. It has become a platitude to say – we are living in an age of revolution.

3. Read the following text carefully, prepare its notes and write a summary.

[5+5]

Acupuncture is a system of treatment of disease which has been practiced in China for nearly 5000 years. It consists in the rapid insertion of fine steel needles, about six centimeters long, on particular spots on the body of the patient. After inserting the needle, the doctor twirls the needle between his thumb and forefinger. There are hundreds of acupuncture points on the body. When acupuncture is made on a spot on the body, energy flows from there along line known as meridians to the diseased organ. The flow of energy helps to restore the balance of the system and thus correct the disorder. The points of treatment may be far from the seat of the disease. For example, to cure a toothache, the acupuncturist may insert a needle on the palm of the patient.

Although China is considered to be the country where acupuncture originated, some forms of treatment resembling it has been reported from other parts of the world by anthropologists. Among some ancient tribes, stones and arrows were used to prick the skin. In another form of treatment, the skin on particular spot of the body was burnt to affect a cure for certain diseases. Whether these kinds of treatment can rightly be classed with acupuncture can be known only after further research.

For long acupuncture was dismissed by the west as a form of superstition like witchcraft and magic cure. Even in China admiration for the western system of medicine was so great that the native systems of treatment were neglected or mistrusted. Moreover, the theoretical basis of acupuncture that was propounded in China was a mixture of spirituality, philosophy and physiology. This stood in the way of its acceptance by Chinese scientists.

During the 1960s acupuncture came to the notice of western scientists, who viewed it with skepticism as well as curiosity. Doctors from Europe went to China to make a firsthand study of this strange form of treatment. They were convinced by what they saw that acupuncture worked. Not only were diseases cured, but even operations were

performed after administering anesthesia by acupuncture. The patient of such an operation could see and know what was being done, but felt no pain. After the operation, he could get up and walk away. Doctors in other parts of the world took acupuncture seriously and some of them trained themselves and set up practices in their countries. In China itself the status acupuncture rose when Chinaman Mao officially ranked acupuncturist with other physicians.

Learning style is not the only area undergoing demystification: our understanding of intelligence is also being reconstructed. The IQ score, developed early in the 20<sup>th</sup> century, is supposed to be a measure of a person's innate intelligence, with a score of 100 defined as normal, or average. The higher the score, the brighter the person. Some of us grew up in communities where IQ was barely mentioned. In many cases this lack of knowledge might have been a blessing. Others of us grew up with "IQ envy", in communities where IQ scores were a big part of our culture. Since the score is considered a fixed, permanent measure of intellect like a person's physical height, the scores engendered strong feelings. Friends who scored higher on an IQ test had a secret weapon, a mysteriously wonderful brain. But then our friend "genius" was stumped trying to unpack and plug in a toaster oven or got hopelessly lost trying to follow the simplest driving directions. We may have been equally puzzled when another friend, who scored horribly low on an IQ test, went on to fame and riches. What is this traditional assessment of intelligence supposed to mean?

3. Read the following text carefully, make notes and write a summary of it. [5+5]

Coronavirus disease (COVID-19) is an infectious disease caused by a newly discovered coronavirus. Most people infected with the COVID-19 virus will experience mild to moderate respiratory illness and recover without requiring special treatment. Older people, and those with underlying medical problems like cardiovascular disease, diabetes, chronic respiratory disease and cancer are more likely to develop serious illness.

The best way to prevent and slow down transmission is to be well informed about the COVID-19 virus, the disease it causes and how it spreads. Protect yourself and others from infection by washing your hands or using an alcohol based rub frequently and not touching your face. The COVID-19 virus spreads primarily through droplets of saliva or discharge from the nose when an infected person coughs or sneezes, so it is important that you also practice respiratory etiquette (for example, by coughing into a flexed elbow)

If COVID-19 is spreading in your community, stay safe by taking some simple precautions, such as physical distancing, wearing a mask, keeping rooms well ventilated, avoiding crowds, cleaning your hands and coughing into a bent elbow or tissue.

Computers and the Internet have made a revolution in science and engineering. Studying computational models of reality can be cheaper and better than studying reality. Sometimes reality is impossible to measure or too steep to scale, and computational models are the only way to get any purchase on it. Those are the actual computer revolutions; the others are mostly potential and not real, locked up in awe-inspiring icebergs that just float around eliciting admiration and making trouble. The computer revolution is still frozen, latent, waiting to happen.

3. Read the following passage carefully, make notes and write a summary of it. [5+5]

The critical period theory is consistent with a vast amount of data that has been accumulating for many years about patients suffering from aphasia, a loss of language abilities associated with brain damage from injury or disease. The data provide conclusive evidence that language is localized in the brain's left hemisphere. Seventy percent of adult patients with an injury to the left hemisphere suffer from some language disability. However, patients with injuries to the right hemisphere retain the ability to speak and understand language perfectly. Their problems lie elsewhere, in activities such as recognizing faces and patterns or finding their way from one place to another.

Evidence for the effects of cerebral lateralization on language learning also comes mainly from research with patients suffering from aphasia after a hemispherectomy, surgery to remove one hemisphere of the brain. Lenneberg (1967), in his own research and in the relevant medical literature, found that 97 percent of children undergoing this operation before the age of ten recovered their language abilities after some temporary aphasia and continued to acquire their first language. In those rare cases where the same type of surgery was performed on adults, however, all the patients were left with complete and permanent aphasia. From this research, it seems that a child's brain has a degree of flexibility that allows the right hemisphere, when necessary, to take over the functions of the left. After lateralization, this flexibility declines significantly, and adults who lose language through brain injuries are unable to regain it. On the basis of these research findings, proponents of the critical period theory claim that it is this lack of flexibility in adults that limits their ability to acquire native-speaker pronunciation in a second language.

1. Edit the following text.

Who is knocking? whispered his wife lying beside him on the floor. I do not know he whispered back breathlessly the second knocking was so loud that the rickety old door could have fallen down.

2. Read the following text and interpret its meaning in your own language:

If we observe the actions of mean, whether as individuals or as groups, and whether scientists or non-scientists, we find that they frequently fall into avoidable errors because of a failure to reason correctly. There are many reasons for this, though only a few can be dealt with here.

[5]

The first difficulty is bound up with (related to) the use of words. It frequently happens that what one person means when he uses a certain word is different from what others mean. Consider, for example, the words intelligence, oxygen, accurate and average. In intelligence, we face the problem that a word may not mean only one thing, but many-in this instance a very complicated set of aptitudes and abilities whose numbers and characteristics are not agreed upon by the specialists who study the phenomenon, and are even less understood by the layman (non specialist). In oxygen, we have a different problem, for although both; a research chemist and a chemical manufacturer identify the word theoretically with the element O, in practice they have different concepts about it. Thus, if the researcher performed a delicate experiment, using the manufacturer's oxygen, it might easily be a failure since the so-called O, whether used as a solid, liquid, or gas, would almost certainly contain other substances. Hence, another difficulty about words is that they often do not differentiate clearly enough between several varieties of the 'same' thing.

3. Read the following text carefully, make it note and write a summary.

[5+5]

Plagiarism is the use of other person's ideas and expressions in your writing without acknowledge the source. The word comes from the Latin word 'plagiaries' and Alexander Lindey defines it as "the false assumption of authorship: the wrongful act of tacking the product of another person's mind and presenting it as one's own". In short, to plagiarize is to give impression that you have written or thought something that you have in fact borrowed from someone else, and to do so is considered a violation of the personal responsibility to acknowledge "academic debts".

The most blatant form of plagiarism is reproducing someone else's sentences, more or less verbatim, and presenting them as your own. Other forms include repeating another's particularly apt phrase without appropriate acknowledgement, paraphrasing someone else's argument as your own, introducing another's line of thinking as your own development of an idea, and failing to cite the source for a borrowed thesis or approach. Plagiarism falls outside the scope of copyright infringement. Copyright infringement, in

contrast, is using the work of a copyrighted work beyond the limit of fair use without the permission of the owner of copyright law are not plagiarism. The penalties of plagiarism can be severe, ranging from loss of respect to loss of degrees, tenure or even employment. At all stages research and writing, you must guard against the possibilities of inadvertent plagiarism by keeping careful notes that distinguish between your own musings and thoughts and material you gather from others.

Even without considering the penalties of plagiarism, the best scholars generously acknowledge their debts to others. By doing so they not only contribute to the historiography of scholarship but also help younger scholars understand the process of research and discovery.

[5+5]

When fission occurs, an average of 2-5 neutrons are emitted from the nucleus. If the fission process can be so arranged that one of these liberated neutrons is captured by another U-235 nucleus to produce another fission, then the reaction will become self-sustaining.

When emitted, neutrons travel at a high velocity, and it is known that such fast neutrons have little chance of being captured by fissile Uranium. However, if slowed down to thermal speeds, their probability of capture is greatly increased. In the normal thermal reactor, the uranium is surrounded by a large mass of moderating material. The liberated neutrons collide repeatedly with the light atoms of the moderator in such a way that they lose much of their energy and eventually become thermalised. The moderator may be either a liquid such as heavy water, or a solid such as graphite. Both these substances are of low atomic weight and have low neutron absorption cross-sections. With the graphite moderator, the uranium which is generally in the form of rods is inserted into channels cut out of the graphite. These channels are so arranged as to form a lattice structure, the object of which is to reduce neutron escape to a minimum. Provided that a sufficient mass of uranium is disposed in a number of rods through the moderator, a high enough proportion of the emitted neutrons will find their way to fissile nuclei to produce a chain reaction. The minimum quantity of uranium required to initiate the chain reaction is called the critical mass.

3. Read the following passage carefully and make notes and write a summary of it. [5+5]

Is classical music any way related to popular music? That is a controversial question. Advocates of classical music claim that it constitutes art and that pop music is only light entertainment. But, that is not always true. Some people have only elevated classical music to that special status by arguing that the works are more complex because of the range of notes involved. However, jazz, rap and many other forms of popular music sometimes do make use of a number of notes that are as complex as classical music. It is also argued that classical music songs are longer, sometimes extending to thirty minutes or more. Popular music songs are shorter and more repetitive so that they can be remembered for people to play or to sing.

Every language has its own popular music, like it has its own classical music. Indian popular music often known as Indi-pop or Hindi pop is a form of pop music in India. It is a fusion of various Indian folk and classical music styles and is also influenced by modern beats from different parts of the world. The major push given to Indi-pop was from Pakistani singer, Nazia Hassan. Indian pop has taken another interesting turn with the "remixing" of old Indian film songs-an attempt to make them sound more modern by adding new beats. These remixes have become very popular among the younger generation; they give the old melodies new life and vigour. The purists among the older generation however maintain that the beauty of the song is lost!

2. Read the following text carefully and interpret it so as to make the meaning clear. [5]

The third great defect of our civilization is that it does not know what to do with its knowledge. Science has given us powers fit for the Gods, yet we use them like small children. For example, we do not know how to manage our machines. Machines were made to be man's servants; yet he has grown so dependent on them that they are in a fair way to become his masters. Already most men spend most of their lives looking after and waiting upon machines. And the machines are very stern masters. They must be fed with coal, and given petrol to drink, and oil to wash with, and they must be kept at the right temperature. And if they do not get their meals when they expect them, they grow sulky and refuse to work, or burst with rage, and blow up, and spread ruin and destruction all round them. So, we have to wait upon them very attentively and do all that we can to keep them in good temper. Already we find it difficult either to work or play without the machines, and a time may come when they will rule us altogether, just as we rule the animals.

3. Read the following passage carefully, make notes and write a summary. [5+5]

Although religion does not inhibit the acquisition of wealth, although it does not hold up large fortunes as evil, the tenor of its teaching, by and large, is to induce an attitude of indifference to worldly things, things which gratify one's lower self and keep one engrossed in money-making. The students should be made to realize that the real goods of life are spiritual, love of things of the spirit and service of one's fellowmen, joy of an ordered disciplined life. These are blessings money cannot buy. What is wealth before such things of the spirit? Of all religious teachers Jesus Christ has dealt more comprehensively than any other with the problem of wealth in all its aspects. He may be called the greatest exponent of the science of wealth. With only four words "Blessed are ye poor!" he changed altogether the values which man attached to human existence and human happiness and acquisition and possession of wealth. Real bliss consisted, he taught, not in riches nor in anything else which the world regarded as prosperity or felicity, but in the joy and happiness derived from being at peace with one's fellowmen through perfect love and fellowship and selfless service and sacrifice.

The word "poor" on the lips of the Master had a spiritual significance - the poor so far as they were poor in spirit, humble before God, simple, God-fearing, teachable, faithful. It could surely not have been his intention to hold up destitution and privation as a blessing in itself. That would have turned life into a terrible ordeal and it would have been heartless to exhort the poor to believe that money was not necessary for one's sustenance or the joys and blessings of life. Even things of the spirit cannot be had without money.

Extreme poverty is as liable to lead to the stagnation and impoverishment of the soul as excessive wealth. Not outward poverty but inward spirit was what Jesus Christ desired and demanded. Every religion asks a man to regard his wealth as a trust. Giving in charity for the relief of the poor and public welfare is not merely an act of compassion, not merely a religious duty, but also an act of social justice. All the gospels of wealth are based on the fundamental concept that none can claim an absolute or inherent right to property. Everyone holds it in trust from God to promote the good mankind. All rights to private property are subject to this primary obligation to God and man.

1. Edit the following text. [5]

But when the war is over, the country recedes from the consciousness and it is rarely even at the back of the mind. The question am I doing any good to the country doesn't occur to the mind; and even the question is what I am doing good or bad for the country occurs only rarely. A limited patriotism is better than none but it is not enough.

2. Read the given text and interpret its meaning. [5]

Computers have solved many problems for us, but they create some problems too. Say, for example, that you are writing a novel. After you are done with your first draft you decide to change your heroine's name from Linda to Lydia. With a typewriter you would have to retype every page containing the heroine's name. With word processing software, on a computer, you press just a few keys and the computer takes care of all the work. But technology hasn't solved all our problems. While many of Shakespeare's original documents survive, it takes only misplaced keystrokes to wipe out your next masterpiece.

3. Read the following passage carefully, make notes and write a summary of it. [5+5]

The dearth of natural resources on the Australian continent is a problem with which government officials there have long struggled. As long distance travel has become ever more important to the national economy. Tourism represents more than 10 percent of national export earnings annually, and in less developed regions such as the Western Territory, the percentage is much higher.

Unfortunately, this otherwise rosy prospect has one significant cloud on the horizon. In recent years, there has been a move towards returning some of the land to the Aboriginal people. As Western society and culture have flourished on Australian soil, tribal people have been forced ever farther inland in an attempt to maintain their traditional ways of living, a desire that the government has striven to respect.

One of the central beliefs of the Aboriginal religion is that certain natural formations have spiritual significance and must be treated accordingly. Strict guidelines determine who may visit these sites and at what times. Unfortunately, many of these sites are the very natural wonders tourists flock to see. If non-Aboriginal people are forbidden to visit these natural wonders, many may choose not to vacation in a region that sorely needs the income generated by tourism.

The Australian government has dealt with this dilemma thus far by trying to support both sides. The Aboriginal council is still trying to put an end to such use of certain sites, however, and it remains to be seen whether respect for tradition or economic desires will ultimately triumph.

1. Edit the following text.

Some argue that american politics has become so polarized that politicians will argue merly to gain power, and the subject to debate is often negligible. The vigorous dispute over where to place a comma in the republican platform for example was motivated not by any significance change of meaning but a desire not to show any deference of the other side.

2. Read the given text and interpret its meaning.

The survival of the publishing industry depends upon the existence of a public who will buy the printed word in the form of newspapers, books and magazines. Over the past several years, however, the advance of electronic media, particularly CD-ROMs, online computer services, and the Internet, has made information available to the public electronically without the need for printed materials. As the availability of electronic media increases and as it is more easily accessible, the public has less need for printed materials.

[5]

3. Read the following passage carefully, make notes and write a summary of it.

[5+5]

According to usage and conventions which are at last being questioned but have by no means been overcome, the social presence of a woman is different in kind from that of a man. A man's presence is dependent upon the promise of power which he embodies. If the promise is large and credible, his presence is striking. If it is small or incredible, he is found to have little presence. The promised power may be moral, physical, temperamental, economic, social, and sexual—but its object is always exterior to the man. A man's presence suggests what he is capable of doing to you or for you. His presence may be fabricated, in the sense that he pretends to be capable of what he is not. But the pretence is always toward a power which he exercises on others.

By contrast, a woman's presence expresses her own attitude to herself, and defines what can and cannot be done to her. Her presence is manifest in her gestures, voices, opinions, expressions, clothes, chosen surroundings, taste—indeed there is nothing she can do which does not contribute to her presence. Presence for a woman is so intrinsic to her person that men tend to think of it as an almost physical emanation, a kind of heat or smell or aura.

To be born a woman has been to be born, within an allotted and confined space, into the keeping of men. The social presence of women has developed as a result of their ingenuity in living under such tutelage within such a limited space. But this has been at the cost of a woman's self being split into two. A woman must continually watch herself. Whilst she is walking across a room or whilst she is weeping at the death of her father, she can scarcely avoid envisaging herself walking or weeping. From earliest childhood she has been taught and persuaded to survey herself continually.

In 1984 Arundati began a brief career in films. She played the role of a village girl in the moule massey sahib and also wrote the screen play for the film in which Annie gives in those ones.

Roy began writing the god of small thengs in 1992 and finished it in 1996.

2. Read the following text carefully and interpret it so as to make the meaning clear.

Ever since humans have inhabited the earth, they have made use of various forms of communication. Generally, this expression of thoughts and feelings has been in the form of oral speech. When there is a language barrier, communication is accomplished through sign language in which motions stand for letters, words, and ideas. Tourists, the deaf, and the mute have had to resort to this form of expression. Many of these symbols of whole words are very picturesque and exact and can be used internationally; spelling, however, cannot.

3. Read the following passage carefully and (i) make notes and (ii) write summary.

To solve the most urgent health problems of developing countries, expert have recommended that priority should be given to primary health care. This approach to health care, as we have seen, emphasizes health maintenance through disease prevention and control. Many of the developing world's deadliest disease The experts point out; can be prevented if clean water and adequate sanitation are provided. Other disease can be prevented by mass vaccination programs. Still other can be controlled by effective health education that gives people information about ways to avoid malaria-carrying mosquitoes or about the importance of nutrition, especially for pregnant women and young children.

Primary heath care, as we have seen, does not merely focus on prevention and ignore the treatment of disease. Another priority for poorer nations is to provide timely diagnose and basic treatment for the general populations instead of technologically advanced and expensive treatment for a few wealthy people. Under international program, the governments of developing countries are given incentives to build community health centers and train health workers. Patients receive immediate attention from doctors, nurses and health workers who have to the necessary diagnostic training and equipmient and have an adequate supply of drugs. These local health centers are much more accessible to people who need treatment than a few hospitals in the larger cities.

If poorer countries can offer this type of health care, the health of their general populations will improve rapidly. A number of developing countries have already shown that primary health care programs can be successful. Cuba eliminated polio in 1972, even before the disease was eliminated in the United States. In 1974, the World Health Organization began a program to immunize the world's children against six vaccine-preventable diseases during their first year of life. By 1994, the vaccinations were protecting 80 percent of children and the annual number of child deaths had fallen by 3 million. Another WHO program, whose goal was to wipe out polio in the Americas, began in 1985. The goal was achieved in 1991. In the year, nearly 2 million children in Peru were vaccinated in one week after polio had been diagnosed in a two-year-old boy. The boy, Luis Fermin, recovered and proved to be the last case of polio in the Americas.

2. Give the interpretation of the following text:

[5]

It is not only in public ways, but in private life equally, that wisdom is needed. It is needed in the choice of ends to be pursued and in emancipation from personal prejudice. Even an end which it would be noble to pursue if it were attainable may be pursued unwisely if it is inherently impossible of achievement. Many men in past ages devoted their lives to a search for the philosopher's stone and the elixir of life. No doubt, if they could have found them, they would have conferred great benefits upon mankind, but as it was, their lives were wasted.

I think the essence of wisdom is emancipation, as far as possible, from the tyranny of the here and the now. We cannot help the egoism of our senses. Sight and sound and touch are bound up with our own bodies and cannot be made impersonal. Our emotions start similarly from ourselves. An infant feels hunger or discomfort, and is unaffected except by his own physical condition. Gradually with the years his horizon widens and in a proportion as his thoughts and feelings become less personal and less concerned with his own physical states, he achieves growing wisdom. This is of course a matter of degree. No one can view the world with complete impartiality, and if anyone could, he would hardly be able to remain alive. But, it is possible to make a continual approach towards impartiality, on the one hand, by knowing things somewhat remote in time or space and, on the other hand, by giving to such things their due weight in our feelings. It is this approach towards impartiality that constitutes growth in wisdom.

Can wisdom in this sense be taught? And, if it can, should the teaching of it be one of the aims of education? I should answer both these question in the affirmative.

3. Read the following passage carefully, make notes and write a summary of it.

[5+5]

A recent investigation by scientists at the U.S. Geological Survey shows that strange animal behaviour might help predict earthquakes. Investigators found such occurrences within a ten-kilometre radius of the epicentre of a fairly recent quake. Some birds screeched and flew about wildly; dogs yelped and ran around uncontrollably.

Scientists believe that animals can perceive environmental changes several hours or even days before the mishap. Animals were noted as being restless for several weeks before a Tashkent, Uzbekistan, earthquake. An hour before the disaster, domestic animals refused to go indoors, and dogs howled and barked furiously. In 1960, an earthquake struck Agadir in Morocco. Survivors recall that stray animals, including dogs, were seen streaming out of town before the earthquake. In a safari zoo near San Francisco, llamas would not eat the evening before a 1979 quake, and they ran around wildly all night.

Unusual animal behaviour preceding earthquakes has been noted for centuries. British Admiral Robert Fitzroy reported huge flocks of screaming seabirds over Concepcion, Chile, in 1835. An hour and a half later, dogs were seen fleeing, and ten minutes later the town was destroyed. Similar stories of chickens running around in apparent states of panic, horses trembling, and dogs barking incessantly were recorded throughout the eighteenth and nineteenth centuries by survivors of earthquake destruction in India, Yugoslavia, Peru, Mexico, and the United States.

In 1976, after monitoring bizarre animal behaviour, the Chinese predicted a devastating earthquake. Although hundreds of thousands of people were killed, the government was able to evacuate millions of other people and thus keep the death toll at a lower level.

The prevention of free inquiry is unavoidable so long as the purpose of education is to produce belief rather than thought to compel the young to hold positive opinions on doubtful matters rather than to let them see the doubtfulness and be encouraged to independance of mind. Education ought to foster the wish for truth, not the conviction that some particular creed is the truth.

One day in 2003, while on her morning walk in the park, Valavolkar felt a shape pain in her left shoulder. The pain soon subsided and she decided to go about her chores.

But a few hours later, the waves of pain returned when she was out walking again, this time to see the neighbourhood dentist about a cavity. It was much than in the worse morning. Overwhelmed with nausea, dizziness and shoulder pain that grew more intense with every step she took, she felt too weak to move. Anyhow, her husband and son being away at work, she assumed it was spondy litis and got in touch with a family friend, an orthopedic doctor, who insisted she see a heart specialist immediately.

At workhardt hospital soon afterwards, it became clear to the medics that she was having a myocardial infarection, a heart attack caused by the blockages- in Valavalkar's case of three blood vessels to the heart. One of them, a key artery, had a 95 percent blockage. An angioplasty was performed and a stent inserted to open up the blockage. Her medical care had been so swift, however, that there was no serious damage to the heart muscle.

Since then she hadn't been without trouble, but a cardiac rehab programe she entered in 2006 has helped her lead a normal life. "I feel fine now," Vaivakar says, looking back. "Periodic check ups are essential and fortunately for me, these have revealed no problems. I am very active now. I even counsel other heart patients to help them stay positive."

"Women have different risk factors for cardiac disease than men, but there is such little awareness, " says Dr. Vanita Arora cardiaec electrophysiologist and associate director at the Max Health Care Superspeciality Hospital in New Delhi.

A woman husband had been seriously ill but finally the doctor announces that he would live. What do you mean? You told me that he couldn't last another two weeks, complained the wife. "Well, I'm going to cure him after all. Surely you're glad aren't you" replied the doctor. It puts me in kind of a trouble said the woman I've gone and sold his clothes to pay for the funeral.

Now mark another big difference between then natural slavery of man to nature and the unnatural slavery of man to man. Nature is kind to her slaves if she forces you to eat and drink, she makes eating and drinking so pleasant that when we can affect it we eat and drink too much. We must sleep or go mad; but then sleep is so pleasant that we have great difficulty in getting up in the morning.

3. Read the following text carefully, make notes and write a summary.

Colonising space could be much more difficult than we imagine. Scientific studies suggest that children born in space might suffer permanent nervous-system damage unless exposed to Earth-like gravity at key points in their development. One difficulty could be learning how to walk. Young children born in space could have trouble walking on Earth because their nervous systems would have developed in the low-gravity environment of space. Even adults might have difficulty fully re-adjusting to life Earth after prolonged periods of weightlessness.

Scientists are just beginning to discover the importance of gravity in the development of life. They are already aware that it has a serious effect on cell metabolism, brain development and DNA synthesis. For this reason pregnant women cannot go into space. Studies of 18 pregnant mice launched into space carrying some 200 fetuses at varying stages of which is a normal aspect of development, slowed down in space, as did cell reproduction. Without gravity the space-grown brains were smaller and had fewer nerve cells than normal mouse brains. How this would affect the functioning of the brain in an adult animal requires further study.

Another effect could be muscle wasting. This has already been observed in astronauts, although there is disagreement as to whether it is linked to the effects of gravity on the muscle cells or just the lack of muscle use. In any case, loss of muscle strength in space has so far proven to be temporary and there are no confirmed reports of any long-term illness in people returning from long periods in space.

Other studies have produced mixed findings. One study showed that laboratory rats reared in space could not figure out how to walk properly on Earth due to spinal-cord damage suffered in space. This study also showed that newborn pups, which are born blind, need gravity in order to learn how to hold themselves upright. Other findings confirm that adult subjects, including humans, can fairly easily recover balance and navigational abilities that have been lost in space.

Clearly the importance of gravity in the development of human beings requires further study before individuals can be sent off to colonise space.

4. Answer any two of the following question. [10]
  - a) How are cables constructed and used in suspension bridges? (Suspension Bridges)
  - b) What do you mean by scientific altitude? Name some qualities of a scientist.
  - c) How did the mother do the duties of a mother and citizen? (The mother of a Traitor)
5. Choose the best words to complete the following sentences. [5]

Incessant practices went up. and the day came when we had to leave to America to study at an advance institute. Always my father was there to guide me. Today, I'm quite a successful pianist, but my father does not stop saying practice more. God smiles and the perfection just glitters when practise touches the top. I now know much than ever that ceaseless effort is the key of success.

The reason why this book has been specially prepared to make it enjoyable reading for people to whom English is a second or foreign language is that an English writer never thinks of avoiding unusual words, so that the learner, trying to read the book in its original form, has to turn frequently to the dictionary and so loses much of the pleasure that the book ought to give.

3. Study the following text carefully. Prepare its note and convert it into summary.

[5+5]

We are well acquainted with the fact that men and women are different in terms of appearance. What many people do not realize is that they are also different in communication technique. Generally speaking, men and women fall into two categories when dealing with communication techniques. When men talk, it is for giving information. This informative speaking is "report talk". "Report-talk" is defined as "public speaking". Women on the other hand, use "small talk" to communicate. "Small talk" is a conversation which is usually considered to be short and meaningless. This communication technique of women is "rapport-talk". "Rapport-talk" in other words is "private speaking".

Without being aware that we are supposed to be different, men and women are at odds with each other. The reason why we become angry or frustrated with the opposite sex is because we have forgotten this fact. They want their opposites to "want what they want" and "feel what they feel". This very attitude makes a path for disappointment and prevents them to take the necessary time to communicate loving about their differences.

Men mistakenly expect women to think, communicate and react the way men do, women mistakenly expect men to feel, communicate and respond the way women do. That is the time when unnecessary friction and conflict occur.

Individuals should be aware that you could use different styles of conversation to fit the information that you are trying to present. You should also never assume that the opposite sex is going to understand what you are trying to say. You should never criticize others who communicate differently than you. Men and women are ruthless about criticizing the opposite sex.

It is never too late to increase the love in your life. You only need to learn a new way. Whether you are in a therapy or not, if you want to have more fulfilling relationship with the opposite sex, it is essential to learn new and healthy ways of relating and communicating.

1. Edit the following text do as to make it free from errors: [5]

It was then that my brother-in-law spoke to me. I m well aware of the hardships faced by these kashmiri vendors he said as i looked at him still confused. they eat in morning then spend the rest of the day roaming around the city on foot hungry and thirsty. When i saw them i wanted to offer them food. But they have their pride. They would never accept anything unless i pretended to be interested in their wares and made the offer of the food look incidental.

Read not to contradict and confute, not to believe and take for granted not to find talk and discourse, but to weigh and consider. Some books are to be tasted, others to be swallowed and some few to be chewed and digested, that is some books are to be read only in parts, others to be read but not curiously and some to read wholly and with diligence and action. Some books also may be read by deputy and extracts made of them by others, but that would be only in the less important arguments and the meaner sort of books else distilled books are like common distilled waters flashy things.

3. Read the following text carefully make notes and write a summary of it. [5+5]

What is a democratic government to do in a country where people are steeped in ignorance and superstition, where there is opposition or resistance to even mild reforms from vested interests is society? It can be said that if the government is to go by consent or consensus it will not be able to do anything. Could the government ever get the conseut or consensus of the people for abolition of untouchability? But has untouchability been really abolished? Frankly speaking, ever now the code of manu is in operation, the large part of code thus prepared.

No law, perhaps, can come into full operation unless it is acceptable to the people. And it is not necessary to say that acceptability can not come without conviction. The government had been taking measure after measure to change the social-economic structure to remove disparities, social and economic. Not that all the measure have gone in vain. Feudalism has been abolished; gates of universities, legislatures, government service etc. have been thrown open to all castes and communities, exploitation of the weaker section of the people has been considerably reduced.

But there has been no change in the outlook of the people. Politicians and administrators still behave like feudal lords: corruption, favouritism and nepotism have not shown any sign of abatement; faith is caste system and all that it may stand for has not weakened. In one word, independence, democracy etc have not shattered the age-old beliefs and conviction. No wonder the blind is leading the blind.

1. Edit the following passage which contains a good many errors. [5]

Alexander was born in 365 BC in Pella Macedonia established by his father, Phillip II, as the centre of the Hellenism. Hurtured on the thoughts of his tutor, Aristotle, he rose to fame like brilliant military leader. He influenced the corse of history, rightfully earning his title as Alexander the great. In 335 BC he became Millitary chaff of all the Greeks. By the time of his death in 323 BC he created an enormous empire, stretching from Adriatic sea to the Indias, and from Caucasian Mountains to Egypt. He spread the Greek spirit far and wide among nation who idolised this great man.

- b) What do you understand by 'a sense of proportion'? [Knowledge and Wisdom]
- c) What do you mean by a carburattor? [The Carburation System]

3. Read the text given below carefully, make notes and write summary of it: [5+5]

Authority in the twentieth century is nowhere what it was. In certain spheres it has disappeared altogether. Public opinion no longer feels bound to inforce morality as it did by means of spoken disapproval and informal penalties. Fathers have ceased to rule the family, employers no longer enjoy the status of materials; the upper class have ceased to inspire imitation as models correct behaviour; school masters and university dons no longer dominate the minds of the young ..... Things once considered inhextently wrong are tolerated where they are thought to do no manifest harm: fornication, adultery, homosexuality, abortion, nudity and erotica flourish openly where they were once legally penalized or forced to be discreetly veiled. Adolescents, who were once subject to the edicts of parental jurisdiction, live as they please, often earning as much as their fathers, and enjoying more legal rights at eighteen than their grandmothers possessed at any time during their lives.

But the decline of authority in the twentieth century has not necessarily meant a rise in liberty. For the concept of authority is not something which stands logically opposed to that of freedom, although some unreflective people may think it does. Authority is really a special kind of power which rests on the consent and belief of those who live under it. Without such free assent, there can be no such thing as authority. So freedom in this important sense is part of the very notions of authority. And when authority is removed, it is only too likely that it will be followed either by the rule of naked power or by anarchy.

4. Choose the correct words from the brackets: [0.5×10=5]

- a) The man and woman .....determined to tell the truth. (is, are)
- b) The horse and carriage.....ready. (are, is)
- c) The teacher said that we.....mortal. (are, were)
- d) I was interested ..... this book. (by, in)
- e) He helped me more than he..... you. (helps, helped)
- f) He is absent..... the class. (from, in)
- g) She cannot part..... her jewels. (from, with)
- h) Had you bought that car, you wouldn't have .....all that trouble. (had, had got)
- i) If one buys a car, it ..... money. (cost, costs)
- j) I feel the room ..... (move, to move)

5. After reading the following paragraph, compare and contrast the pollution of a city in Nepal.

The means of transportation also added greatly to air and noise pollution. Steam engines, buses and other vehicles exhaust so much smoke that life in the industrial city and town has become a victim of incurable diseases. Pure air has become a thing of past. The noise of machinery along with that of the motors, scooters and buses etc. have brought deafness to millions of people. Their normal hearing scale has suffered badly.

6. Change the following bibliographic references from MLA style into APA:
